Alcohol advertising: the last chance saloon

Although the content of alcohol advertisements is restricted, Gerard Hastings and colleagues find that advertisers are still managing to appeal to young people and promote drinking

Targeting and appealing to young people

Upcoming generations represent a key target for alcohol advertisers. Although the documents mainly refer to this group as starting at the legal drinking age (18 years), this distinction is sometimes lost. Thus market research data on 15 and 16 year olds are used to guide campaign development and deployment, and it is clearly acknowledged that particular products appeal to children (Lambrini, for instance, is referred to as a “kids’ drink”). Many references are made to the need to recruit new drinkers and establish their loyalty to a particular brand: WKD, for instance, wants to attract “new 18 year olds,” and Carling takes a particular interest in the fact that the Carling Weekend is “the first choice for the festival virgin,” offering free branded tents and a breakfast can of beer.

Campaigns aspire to be associated with and appeal to youth: Smirnoff Ice wants to “become the most respected youth brand (overtaking Lynx [deodorant]).” New media channels are used because they will appeal to and engage young people, and Lambrini’s 2007 television campaign set out to be “a cross between myspace and High School the [sic] Musical.”

University students are another focus. A Smirnoff presentation says, a “great place to create excitement and drive recruitment is within the student community,” and Carling wanted a “greater focus on students: as a core recruitment audience.” Carling’s aim turned into a proposal to produce a magazine for first year students—including those at Scottish universities, where a significant proportion of fresher are under the legal drinking age.

Attitudes to drunkenness and potency

Advertisers are well aware that some groups drink irresponsibly. Brand strategy documents and campaign briefs abound with references to unwise and immediate drinking. Far from regretting or avoiding any promotion of this behaviour as the codes require, producers and agencies analyse it for market opportunities. Thus Lambrini’s qualitative research with young women provided respondents with stimulus themes such as “getting pissed,” “one night stands,” and “drinking games” to help them discuss their experiences with the product (figure). Increasing consumption is a key promotional aim, contradicting the claim that the intention is simply to encourage brand switching (box 3 on bmj.com).

Drunkenness is also linked to high alcoholic strength—any reference to which is forbidden by the codes. Yet Smirnoff has worked out that “potency can be communicated in a number of ways,” including by reference to the drink being “ten times filtered or triple distilled,” noting that “for consumers both result in increased purity and therefore increased strength.” This theme was given heavy coverage on the Smirnoff website.

Association with social success

Advertisers are not allowed to suggest that alcohol can enhance the social success of either an individual or an event—yet the documents are full of references to brands doing both things. Thus Carling is described as a “social glue” by its promotion team, and the brand overtly seeks to “own sociability,” as this is the way to “dominate the buzz market.” Lambrini is described as a “social lubricant” in a creative brief for a summer campaign, and the “brand key” for the product, produced in 2008, positions it as “the perfect drink” for the “last chance saloon.”

Efforts are also made to associate brands with personal transformation and enhancement.

Selection of documents

Because alcohol advertising is so extensive (around £800m (€900m; $1.3bn) a year) it was not possible to examine documents from all relevant companies. Requests were therefore sent to only four producers, chosen for their profile, and their respective communications agencies; and they were asked to send documents relating to just five brands out of the dozens on their books for 2005-8 (table). We analysed the documents on behalf of the committee.

Although the sample is small, the requests resulted in thousands of pages of paper documents and nearly three gigabytes of electronic ones. These comprised contact reports between client and agency, client briefs, creative briefs, media briefs, media schedules, advertising budgets, and market research reports (box 1 on bmj.com).

We conducted a thematic analysis of the documents. We initially looked at four themes that are banned by the advertising code of practice (box 2) as well as sponsorship and new media.

Research has established that alcohol advertising, like that for tobacco and fast food, influences behaviour. It encourages young people to drink alcohol sooner and in greater quantities. From a public health perspective, advertising of alcohol should clearly be limited. The United Kingdom has opted for a system of self regulatory controls that focuses primarily on the content of advertisements, with some limitations on the channels that can be used. This is overseen by the Advertising Standards Authority, through the Committee of Advertising Practice, which represents the interests of advertisers, agencies, and media owners.

As part of its alcohol inquiry, the House of Commons health select committee wanted to explore the success of self regulation. It obtained a large number of internal marketing documents from alcohol producers and their communications agencies in order to examine the thinking and strategic planning that underpin alcohol advertising and hence show not just what advertisers are saying, but why they are saying it. Here we present the key insights to emerge.

Lambrini can “transform you into the glamour pusses you know you should be.”

**Sexual attractiveness**

Suggesting that alcohol can enhance either masculinity or femininity is proscribed, yet the documents are full of references to both. Thus the need to “communicate maleness and personality” is noted as a key communications objective for WKD, and Diageo highlights the brand values and personality of Smirnoff Black as “urbane,” “masculine,” and “charismatic”; dictionary definitions of these characteristics are accompanied by photographs of George Clooney, Bono, and Ewan McGregor. Mascularity is often equated with drinking too much (as in the Carling commandments, which include “Thou shalt never desert thy mates in drunken distress” and “Thou shalt never miss a round”), alcoholic strength (“potency of birth, which is easily side stepped. Furthermore, viral marketing campaigns are designed to encourage young people to pass on messages to their friends, with no means of controlling who receives them. The aim is to gain credibility by making it seem as if the message is from a trustworthy friend (“It should look like it’s come from your mate, but is infact [sic] Carling branded”). Similarly, campaigns promoting girls dancing the “Lambrini” have resulted in many self filmed imitations—often featuring young men: as one Carling executive expresses it, “They [young men] think about 4 things, we promote 6.”

Similar sexual stereotypes and appeals are found in campaigns aimed at women. In 2006, Lambrini also teamed up with Pretty Polly tights to run a promotion to find the “Lambrini girl” with “the UK’s sexiest legs.”

**Power of sponsorship**

Although sponsorship is not specifically included in the advertising code, it is a large and powerful part of alcohol promotion. Sponsorship is a way of raising brand awareness, creating positive brand attitudes, and building emotional connections with consumers. A Carling document about a music sponsorship campaign sums this up neatly: “Ultimately, the band are the heroes at the venue and Carling should use them to ‘piggy back’ and engage customers [sic] emotions.”

Although the codes prohibit any link between alcohol and youth culture or sporting achievement, the documents discuss in detail sponsorship deals with football, lads’ magazines, and music festivals. Often the intent of such sponsorship is specifically to reach young people: Carling’s sponsorship of the English football League Cup (Carling Cup) is a way to “recruit young male (LDA [legal drinking age] -21) drinkers into the brand.” Events are chosen to show how well the brand understands and relates to young people: as one Carling executive expresses it, “They [young men] think about 4 things, we brew 1 and sponsor 2 of them.”

Sponsorship is not explicitly covered by the codes, so producers can take advantage of the resulting regulatory ambiguity, as box 4 shows.

**Use of new media**

Digital media—including social networking sites, email, viral marketing, and texts—are a fast growing channel for alcohol advertising. They offer advertisers interactivity and increased creative freedom and are less regulated than traditional media. For example, the only control on access to alcohol related sites is the need for the user to provide an adult date of birth, which is easily side stepped. Furthermore, viral marketing campaigns are designed to encourage young people to pass on messages to their friends, with no means of controlling who receives them. The aim is to gain credibility by making it seem as if the message is from a trustworthy friend (“It should look like it’s come from your mate, but is infact [sic] Carling branded”). Similarly, campaigns promoting girls dancing the “Lambrini” have resulted in many self filmed imitations—often featuring girls who appear to be under the legal drinking age—being posted on the company’s and various social networking sites.

One producer recognised that this presents a dilemma. An evaluation of Smirnoff’s Facebook presence showed that almost three quarters of members of Smirnoff related groups belonged to groups where there is a significant
risk of breaching the company’s internal marketing code (for example, as a result of depicting or encouraging irresponsible drinking); nevertheless, Smirnoff continues to do all it can to boost the popularity of an individual or the success of a social event. The documents we analysed show that attempts to control and promote the togetherness of the pack—the moment of belonging—is illustrated by Lambriini’s tenacious attempts to retain the strapline “Girls just wanna have fun” in the face of repeated advice from the regulator that it was “targeting young girls, and promotes getting pissed” and was “unsuitable”. Only when the strapline appeared in newspaper coverage of the death of a young woman in an incident that occurred after she had been drinking Lambriini did the company consider disassociating themselves from it.

Inadequate regulation
The documents we analysed show that attempts to control the content of alcohol advertising have two systemic failings. Firstly, the sophisticated communications and subtle emotional concepts such as sociability and masculinity that comprise modern advertising (and sponsorship) often defy intelligent analysis by the regulator, especially when the thinking and strategising that underpins them remain hidden (box 5). Secondly, producers and agencies can exploit the ambiguities in the codes and push the boundaries of both acceptability and adjudication.

The second problem of pushing the boundaries is illustrated by Lambriini’s tenacious attempts to retain the strapline “Girls just wanna have fun” in the face of repeated advice from the regulator that it was “targeting young girls, and promotes getting pissed” and was “unsuitable”. Only when the strapline appeared in newspaper coverage of the death of a young woman in an incident that occurred after she had been drinking Lambriini did the company consider disassociating themselves from it.

Turning to scope, sponsorship must be covered by the regulations, and digital media should also come under much greater scrutiny. In addition, particular efforts should be made to protect children from alcohol advertising (box 6).

The current problems with UK alcohol promotion are reminiscent of those seen before tobacco advertising was banned, when attempts to control content and adjust targeting simply resulted in more cryptic and imaginative campaigns. Indeed David Abbott, a leading advertiser of the time, argued that the codes were in fact acting as a stimulus, not a constraint, on creative imagination and that the only solution was an outright ban. History suggests that alcohol advertisers are, appropriately enough, drinking in the last chance saloon.
