Role of three-dimensional virtual environments in the globalisation of Science education

Dr. Shailey Minocha, The Open University, UK. s.minocha@open.ac.uk
http://uk.linkedin.com/in/shaileyminocha

3D virtual environments
- sense of shared space
- sense of presence
- formal and informal learning

3D simulations
- interactive simulations (e.g. animal cell, brain, etc.)
- a sense of immersion

Virtual experiments
- experiments performed individually or in teams
- collect and analyse data
- networking with international experts

Learn through
- practising real-life scenarios before carrying them out
- by getting acquainted with the environment and the equipment

Explore situations
- by experiencing them in a virtual environment which may not be feasible in real life (e.g. underwater marine life; the solar system; an eclipse)

Learn by interacting with
- 3D exhibits of real-life scenarios
- multimedia resources (e.g. websites, videos)
- learning activities designed around individual goals
