Using Jing to enhance student understanding through video recorded assignment commentary
Using Jing to enhance student understanding through video recorded assignment commentary

Hannelore Green h.green@open.ac.uk and Felicity Harper f.s.harper@open.ac.uk

What is Jing?

Jing is a screen capture tool which allows you to make a five-minute video recording of activity on your computer screen with an audio commentary. In this poster, we report on the findings of a pilot project, a current research project and spontaneous use of Jing by tutors working on modern language modules in the Open University. Jing can be downloaded free from http://www.techsmith.com/jing.html.

Tutor’s Comments and Advice to Student:

Dear Ian

You have produced another good assignment. You have already learnt a great deal in this module and I am impressed at how well you use the material covered in your work. Please see below my detailed comments on your work and read these in conjunction with the annotations I have made on your script. I have also recorded some additional video feedback where I talk through some of your errors in more detail. Please click here for this: http://screencast.com/t/7...........

Task Completion, Organisation and Development

You have provided almost all the required information. It would perhaps have been better to organise the information in a different way and start by describing the main events of the Edinburgh Festival before you compare it to Karneval in Cologne?

How tutors found it

You can show [the student] annotations step by step and explain why you are doing [what you are doing]. This is less overwhelming for students. Visually, it is more engaging. It adds another dimension to feedback and may, because of its less traditional presentation, reach more students. The feedback on a weak piece of work may appear “softer”. My feedback felt “warmer” because I could speak to the student. There was an imagined dialogue. The written and oral feedback complement each other very well.

What students thought

The use of highlighting and the moving cursor worked well. To hear the tutor’s voice with the feedback made in a positive way was motivating. The feedback felt more personal and was easily understandable. It showed how my work had been assessed and […] generally made me feel that my work had been valued by my tutor. It was a very positive, personalised and motivating experience.

To talk through corrections as they are making them

To explain corrections which they have already made in the marked work

To draw attention to key errors which they have already corrected in the marked work

To correct errors which they have shown are errors but not yet corrected

To provide a generic recording regarding a language issue for all students making similar errors

Where next?

• Analyse student and tutor feedback from research project questionnaires
• Analyse how tutors have used Jing and how effective this seems to have been
• Provide guidance notes to tutors on potential uses of Jing to enhance student learning
• Create a resource bank of generic recordings for use in supporting language learning
