OU Mobile VLE: extending the reach of studying through the mobile web

Student survey feedback

- Use of 'dead time', mobile use also includes that on sofa
- Mobile phone contracts predominate [from current user sample]
- Usage: Touch phones (up) Smart phone (down), changing bi-yearly
- Assessment [scores] remain a key driver
- More frequent visits via mobile over the 2010 period
- Reading updates and forums are the most completed activity
- Accessing different parts of Study Planner important
- Switching view or mode depending on requirement
- Downloadable resources preferred in standard formats
- OU app for adding multimedia rather than 3rd party/intermediates
- Self-help, FAQ-based and crowd-source online support sufficient for device-specifics

Survey taken in October 2010 with n=557 responses, followed up by ongoing feedback.

Theme design

- Desktop and mobile themes redesigned in parallel around the central study planner structure, and progress 'tick boxes'. Usability and Accessibility tested with students.
- Activities optimised for smaller screens, concentrating on key and usable functions.
- Navigation and optional features separated out.
- Signposting to activities in planner, sub-pages and embedded throughout. Tool development for mobile now mainstreamed. Some constraint on text entry in first release.

Mobile-optimised Resources

- Mobile-optimised smart/touch-phone interface: ‘Launchpad view’
- Module home page
- Resources
- Forums
- Study Planner
- Planner
- Forums
- Resources
- First released: October 2011

Next?

- Extending mobile theme to other access points. Realigning subject-based entry points around qualifications.
- Thin-client/HTML5 apps in prototype, including:
  - Tokenised (easier) sign-in, with 2-tier authentication
  - Cached content packages – incl. multimedia and eBooks
  - Mobile services for distance and blended learning
  - Rich media contribution and collaboration

Learning analytics

- Current usage levels from viral, peer and self-discovery with no publicity. Longitudinal research will add further qualitative data for evaluation.

Monitoring usage

- Building on prior longer-term logging of mobile usage on student portals. Working with comScore to interrogate device usage breakdown, comparing trends across different services.
