Enhancing the impact of continuing professional education on practice: Whose responsibility is it?

Dr Liz Clark and Professor Jan Draper
Faculty of Health and Social Care
The Open University, United Kingdom

ISSOTL12 Research on teaching and learning: integrating practices
Overview of presentation

• Project context
• Development of the Impact on Practice (ImP) framework
• Project outline
• Main findings
• Implications
Project context

• **Significant global investment** in continuing professional education (CPE)

• Lots of **rhetoric** about the benefits of lifelong learning to patient care yet **little robust evidence**

• Lack of clarity about the **responsibility** for ensuring **return on investment**

• Financial pressures will further increase the requirement to demonstrate **value for money** and **quality outcomes** for patients/service users
Context: student self-report data

- ‘I’ve developed an end-of-life care package for patients in my clinical area.’

- ‘Improved practice in our deep vein thrombosis service has impacted on patient care as a result of my learning.’

- ‘I’ve got my dream job ... I still find it hard to believe that I’m actually doing what I’ve only dreamed about doing for so long. It’s a brilliant feeling to be able to go home at night with my head still buzzing with ideas of ways to improve older people’s care.’
• Limitations of existing evidence base:
  – the studies tend to be short-term, small-scale, programme-specific and confined to a single locality
  – over-reliance on learner satisfaction
  – use of retrospective methods (errors of recall and bias)
    – assumed benefits to patients/service users
• What is meant by impact on practice?
  – levels and frameworks
• These complexities have led to lack of progress
Development of the ImP framework

• **Structured literature review** (health care, social care and education literature). Key themes emerged:
  – organisational culture
  – role of the manager
  – link between education provider and organisation

• Contributions from an **Expert Advisory Group**

• **In-depth conversations** with key stakeholders to develop/refine the framework

• Series of **interactive conference presentations and workshops**

Feedback on the ImP framework

• ImP framework was disseminated/discussed at a number of conferences

• Initial feedback was that it is easy to understand, user friendly, flexible and the potential to apply more widely

• Need for a more systematic evaluation to explore stakeholder perceptions of the need for and utility of the ImP framework
Project outline

• **Conventional methods** do not easily lend themselves to complex, real-world evaluation

• Methodological intent of realist evaluation (RE) is to create **a more holistic picture** of the phenomenon under investigation (Pawson and Tilley, 1997)

• **Influence of the real world** is not eliminated and is regarded as influential in the evaluation process

• RE emphasises the importance of context and tries to find out **why things work, for whom and in what circumstances**
Project outline

• We adapted RE methodology to explore stakeholder perceptions of the need for and utility of the ImP framework in one self-selected county workforce group in England; all the trusts and education providers were invited to participate

• Worked with three NHS trusts: two hospital trusts and one primary care trust and two higher education providers
Project outline: data collection

- Two rounds of semi-structured telephone interviews with four groups: self-selected post-registration healthcare students, managers, module leaders and NHS trust Board members

- **Round 1** interviews focused on the factors relating to pre-selection and selection processes \((n=41)\)

- All interviews were digitally recorded and transcribed

- **Round 2** interviews explored the themes that emerged from the initial interviews and the factors relating to the module experience and follow-up, with the same individuals as for Round 1 \((n=32)\)
Project outline: data analysis

• Data were analysed using NVivo

• Thematic content analysis was initially undertaken separately for each stakeholder group and each round of interviews

• The RE guiding principle of ‘what works’ and ‘what does not work’ was used to search for meaning across all the data

• Four cross-cutting themes were identified from the combined data
Main findings: Four key themes

- **Organisational context**
  Strategic approach to CPE
  Culture and process relating to workplace, education provider & shared

- **Partner**ship working
  Education provider led
  Workplace led
  Joint

- **Supportive learning environment**
  Workplace
  Education provider

- **Attributes**
  Learner
  Manager
  Educator
  Shared
**Theme 1: Organisational context**

**Strategic approach to CPE**

**What works**
- Organisational commitment to CPE
- Service users informing organisational strategy
- Ring-fenced CPE funding and clarity about its allocation
- Effective staff appraisals that address both organisational and individual needs
- Planned change vs acquiring new knowledge

**What does not work**
- CPE not connected to the ‘day job’
- Lack of clarity about what CPE is available and funding
- Lack of expectation re. follow up
- Lack of understanding of individual’s ability to initiate change
- Inadequate feedback from managers
Theme 1: Organisational context
Culture and process

What works
- Managers supporting students’ use of new knowledge in practice (WP)
- Flexible provision to accommodate clinical demands (EP)
- Effective module evaluation (EP)
- Theory to practice and practice to theory (S)
- Celebrating achievement (S)

What does not work
- Organisational barriers that inhibit change (WP)
- Lack of transparent and equitable selection processes for CPE (WP)
- Online evaluation with poor response rates (EP)
<table>
<thead>
<tr>
<th>What works</th>
<th>What does not work</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Ability to respond to service needs (EP)</td>
<td>• Knee-jerk reactions to service demands (EP)</td>
</tr>
<tr>
<td>• Timely dissemination of course information to appropriate people (EP)</td>
<td>• Lack of guidance for managers re. module content/requirements (EP)</td>
</tr>
<tr>
<td>• Locally provided induction to include managers (EP)</td>
<td>• Lack of information from EP about who has/has not successfully completed modules (EP)</td>
</tr>
<tr>
<td>• Service engagement in curriculum development, monitoring and module evaluation (WP)</td>
<td>• Module evaluations that don’t take account of impact on practice (Jt)</td>
</tr>
<tr>
<td>• Shared commitment to maximise use of new knowledge in practice (Jt)</td>
<td></td>
</tr>
</tbody>
</table>
Theme 3: Supportive learning environment

What works

• Transparent and equitable allocation of study time (WP)
• Manager’s support + supervisor/mentor/critical friend (WP)
• Opportunity for students to learn from each other (WP)
• Clarity about module requirements and academic levels (EP)
• Guidance on support available from tutors, etc. (EP)

What does not work

• Managers weighed down by clinical priorities (WP)
• Inequity of study leave (WP)
• Negative impact of studying on days off affects ability to recover from job demands (WP)
• Inflexibility of education providers in relation to attendance and deadlines (EP)
• New students unprepared for the amount of work required (EP)
Theme 4: Attributes

What works

• Keen students with positive attitudes to learning and change (L)
• Willingness to take responsibility for sharing learning (L)
• Manager’s enthusiasm for CPE (M)
• Manager who is open to change and leads by example (M)
• Skilled facilitators of learning (E)
• Fostering a questioning/critical approach to practice (S)

What does not work

• Students who don’t want to learn, are frightened of studying or lack confidence (L)
• Students with poor language, IT and time management skills (L)
• Reluctance to seek help and/or share knowledge (L)
• Managers who lack time and/or skills to facilitate changes in practice (M)
Implications

• Need for integrated thinking that ‘stitches together’ service needs, education commissioning and learning provision

• Importance of effective communication and partnership working between service and education providers

• Education provision that is sufficiently flexible to accommodate workplace demands

• Effective appraisal systems that focus on organisational as well as individual needs

• Transparent recruitment and selection of individuals to undertake CPE
Implications cont.

• Importance of ongoing support, including the crucial role of the manager

• A focus on planned change rather than the acquisition of new knowledge; an expectation that there will be follow-up about how learning is being used to benefit patient/service user care

• Feedback from service managers about their CPE requirements and the appropriateness and benefits of the CPE undertaken

• Taken together, the findings suggest that perhaps we need to do less better
Reflections on the use of RE

- With its emphasis on contextual sensitivity, RE enabled us to explore factors that enable/constrain the impact of CPE on practice.

- The organising principle of ‘what works’ and ‘what doesn’t work’ was helpful and reflects Ellis and Nolan’s (2005) concepts of ‘best practice’ and ‘poor practice’.

- Other aspects of RE such as ‘context’, ‘mechanism’ and ‘outcome’ were more difficult to apply – in particular the distinction between ‘context’ and ‘mechanism’.

- Education evaluation involves complex interventions and RE may offer a useful methodology.
