3D Virtual Geology Field Trip

Dr Shailey Minocha
email: shailey.minocha@open.ac.uk
Second Life: Shailey Garfield

Being in Second Life

- enjoyable
- sense of presence, co-presence
- sense of engagement
- collaborative learning
- contextual learning
Projects in Second Life

• socialisation
• team working in distributed teams
• design of 3D learning spaces
• navigation and wayfinding in 3D learning spaces

Institutional perspective

• software not owned by us
• control
• availability
• not perceived for education alone
Funding came through in 2012

- Chose virtual Geology trip as the candidate App for development
- Compared: Unity 3D, Open Sim, Second Life
- Chose Unity 3D as the platform
  - browser-based App
  - stand-alone App and not a part of a social world

3D Virtual Geology Fieldtrip

- scope to demonstrate interactivity, sense of being there
- realism and high degree of fidelity
- visual and spatial experience not constrained by a ‘flat’ 2D user interface
- helps internalise the sense of exploration
Field trips in our institution

• real field trips two or three times a year (tutor-led)
• DVD to facilitate reflection and activities
• DVD also helpful for students who are unable to go for real field trips

Lake District in the UK

• Skiddaw field area
• 6 sites (site 1 in Phase 1 of the project)
• Skiddaw group of rocks: sandstone, slates, granite
• Geological significance
  – how metamorphism varies in the Skiddaw group sedimentary rocks due to the intrusion of the Skiddaw granite
  – how the Skiddaw group rocks deformed during the mountain-building event
Video Part 1 (what to look for?)

- audio and textual guidance (tutor-led)
  - introduction
  - Geology of the area
  - instructions for learning activities
- choice of avatars
- choosing equipment for the field trip
- list of learning activities
- using the compass, sketch points and sketching

3D Virtual Geology Fieldtrip App

- Realism
  - design of the environment or landscape
    - LIDaR data
    - Photogrammetry data
    - 3D modeling to weave it together
  - learning activities (similar to a real field trip)
    - choosing the equipment, learning to use the compass, sketching rocks
Video Part 2 (what to look for?)

• student investigates grain composition of one rock
• overlaying maps on the landscape
  – ordnance survey map
  – Geology map
• cross-section of the mountains
  – showing the rocks (geology) underneath
• different views in each of the contexts
  – overhead, North-East, North-West, etc.

3D Virtual Geology Field Trip App

• Non-realism (things you can’t do in a real field trip)
  – microscopic views of rocks within the environment
  – draping maps on the landscape
  – cutaways into the mountainside to see the geology underneath
Opportunities for students and educators

• practice/training for real life field trips
• reflect on your experiences of real field trips
• fly across the landscape
• additional field trip to a real field trip
• could replace a real field trip if resources are limited

Limitations: student learning and experiences

• risk awareness skills
• challenges of being outdoors
• challenges posed by the weather
• challenges of using the equipment in real life
• bonding with other students
Challenges of 3D virtual field trips

• costs involved in design, development and evaluation
• multi-skilled team and specialist developers are required
• student training
• overcoming the (negative) perceptions that people have about virtual field trips
• how best to communicate that virtual field trips are not being proposed to replace real field trips
