Investigating the role of wearable activity-tracking technologies in the well-being and quality of life of people aged 55 and over

Shailey Minocha, Caroline Holland, Duncan Banks, Catherine McNulty and Ana Tudor

OU in collaboration with Oxford University, Age UK Milton Keynes, Carers MK and Samsung UK

Motivation
Stakeholders

- GPs and healthcare professionals
- People aged over 55 years who were already using these devices
- Carers and people they care for
- People aged over 55 years who hadn't used these devices

Evidence base

- Ethical dilemmas
- Making sense of the data
- Interfacing of the devices with apps
- Usability of the devices
- Self-monitoring of health
- Behavioural changes

Evidence base
GPs and healthcare professionals
people aged over 55 years who were already using these devices

evidence base + participants

carers and people they care for
people aged over 55 years who hadn’t used these devices
