The OER Research Hub is a project funded by the Hewlett Foundation to research the impact of open educational resources (OER) on teaching and learning. During 2013-2015 survey data were collected from approximately 7,500 users of OER around the globe. This report presents a frequencies analysis of responses obtained from EDUCATORS.

Educators use OER to broaden their teaching methods and the range of resources available to their students.
Selecting OER

Which of the following factors would make you more likely to select a particular resource when searching for open educational content? N=987

- Evidence of interest in that resource (e.g. lots of downloads) 45%
- The resource being recently created, uploaded or updated 43%
- The resource being easy to download 64%
- A description of learning objectives or outcomes being provided 65%
- The resource being created by a reputable/trusted institution/person 68%
- The resource having a Creative Commons license 40%
- The resource having an open license allowing adaptation 43%
- The length/complexity of the resource 41%
- Use of interactive or multimedia content (e.g. video) 53%
- Positive user ratings or comments about the resource 48%
- Personal recommendation 51%
- Having previously used this resource successfully 53%
- The resource being relevant to my particular interests/needs 76%
- The resource featuring a catchy title or attractive image(s) 14%
- The resources having previously been used with students 24%
- A detailed description of the resource content being provided 52%

Relevance, reputation and clear learning objectives guide educators’ selection of open content.
Challenges
