LEARNING ABOUT
TEXT AND DATA MINING
The future of open science

MAKING SENSE OF LARGE VOLUMES OF SCIENTIFIC CONTENT

WHY TEXT AND DATA MINING?
We are sitting on a gold mine of scientific knowledge. At the moment, there are more than 50 million scholarly articles and every 13 seconds a new article is published. If we want to unlock the potential of this knowledge, we need text and data mining (TDM). It can access and analyse millions of texts quickly and reveal patterns and trends that can lead to new discoveries.

GENERAL CHALLENGES
• Technical skills of end-users
• Legal barriers
• Interoperability barriers: even open data hard to retrieve

POLICY LEVEL
OpenMinTeD collaborates with FutureTDM, a project that addresses TDM barriers at the policy level.

TACKLING BARRIERS TO INTEROPERABILITY
The OpenMinTeD platform will be interoperable, meaning that researchers will be able to apply different tools and services to different datasets and can even combine datasets from different sources. OpenMinTeD sets out to create a framework that ensures that all tools, services, resources and legal aspects work together. Our main goal: a sustainable infrastructure for text and data mining.
