How to develop evidence based practice to support witnesses on the autistic spectrum (ASD) when they give evidence

Dionysia Lali, PhD Student
Open University
School of Psychology

How is it hard for ASD witnesses to remember unfamiliar faces?

Studies have shown that individuals with High Functioning Autism can act as reliable witnesses but they may be more reliant on prompts and cues to help accurate recall and identification.

McCrory et al, 2006; Bowler et al, 2004

A framework to help in the design and evaluation of an identification process that takes into account the cognitive profile of witnesses with ASD, hence maximising the quality of description provided and the accuracy of their responses during a video line up.

What could work?

Language

Understanding instructions

To develop instructions

Repetitive questioning

Useful resources

Autism: A Guide for Police Officers and Staff
www.autism.org.uk/.../publication s/autism-a-guide-for-police.ashx

At the interview stage

At the identification line-up

A sketch approach

- Ask them to draw (rather than verbally recall) anything they feel would help them remember what/who they saw

- Allow them to access their initial sketch to help retrieval and recollection of the face of the suspect
