Opening up in Education

In education we have seen the rise of parallel open or ‘opening’ movements around:

• **Learning and teaching**: open educational resources and open delivery models (from OCW to OER, Open Textbooks, and lately, MOOCs)
• **Research**: open access (OA) to research publications (shaking up traditional publishing models and also driving emergence of open peer review models)
• **Data**: open access to government and research data (OD)

Which has brought us to a brave new world….
of the ‘Open Silos’
No Interaction!
Parallel Open Movements

- Education
- Research
- Data

Open Silos
Research

- Open Science
- Open Data
- Open Access
- Open Peer-Review
- Open Trials
Thinking about Open Data - through an Open Education Lens

The illusion of access promoted by computers provokes a confusion between the presentation of information and the capacity to use, sort and interpret it. (Brabazon, 2001)
Thinking about Open Data - through an Open Education Lens

...as with the earlier discussion concerning the “digital divide” there would, in this context, appear to be some confusion between movements to enhance citizen “access” to data and the related issues concerning enhancing citizen “use” of this data as part, for example, of interventions concerning public policies and programs. (Gurstein, 2011)
Open Data: the Open Definition

• Availability and Access: the data must be available as a whole and at no more than a reasonable reproduction cost
• Re-use and Redistribution: the data must be provided under terms that permit re-use and redistribution including the intermixing with other datasets.
• Universal Participation: everyone must be able to use, re-use and redistribute - there should be no discrimination against fields of endeavour or against persons or groups.
Where does OD come from?

• International agencies and organisations
  • Word Bank; United Nations; EU

• National Governments and their agencies
  • UKOD; GermanyOD; USA

• Local governments
  • Sardinia; London; Barcelona

• Non-governmental organisations
  • ODI; Monithon

• Academic institutions and research centres
Open Data for developing ‘transversal skills’

• Students construct knowledge by critically analysing information from various sources and formats, including data.
• Being capable of analysing and interpreting raw data can be key to the development of transversal skills, which are defined by UNESCO as “critical and innovative thinking, inter-personal skills; intra-personal skills, and global citizenship”.

Skills and social participation

• If one of our goals as educators is to develop transversal skills in students, towards enabling them to function as citizens and to actively participate in the discourse and debates of society, then we propose that Open Data can play a key role.
Open Education for social participation

Open Education

- OER
- Open Textbooks
- Open Courses
- Open Repositories

Open Science

- Open Data
- Open Access Papers

Relationship with society

- Critical Thinking
- Social Engagement
<table>
<thead>
<tr>
<th>Skills / Level students can</th>
<th>Basic</th>
<th>Intermediate</th>
<th>Proficient</th>
<th>Advanced</th>
</tr>
</thead>
<tbody>
<tr>
<td>Critical thinking</td>
<td>Understand basic concepts of critical thinking</td>
<td>Use data to verify information from the media</td>
<td>Analyse phenomena from their region using data and write reports critically analysing solutions</td>
<td>Present data visualisations to present their findings using complex statistical modelling</td>
</tr>
<tr>
<td>Data analysis skills</td>
<td>Analyse data using quantitative and qualitative methods</td>
<td>Use proficiently software for data analysis such as SPSS - NVivo</td>
<td>Use proficiently software for data analysis such which are relevant for their own discipline</td>
<td>Develop their own databases using systems such as ORACLE</td>
</tr>
<tr>
<td>Data curation skills</td>
<td>Organise datasets in simple folders</td>
<td>Identify different sources of datasets and organise it in databases</td>
<td>Use digital tools for data curation and share it with others</td>
<td>Develop databases and organise datasets, and embed metadata into the files to facilitate access to the resources</td>
</tr>
<tr>
<td>Data management skills</td>
<td>Identify datasets from different sources</td>
<td>Select datasets from different portals in different formats</td>
<td>Extract, filter and compare data from different data sources creating a single dataset</td>
<td>Filter and format data in different formats analyse it creating complex datasets</td>
</tr>
<tr>

<tr>
<td>Data Mining skills</td>
<td>Locate CSV files on the internet</td>
<td>Extract datasets from PDFs</td>
<td>Extract datasets from different sources</td>
<td>Use complex methods for developing datasets</td>
</tr>
<tr>
<td>Data visualisation skills</td>
<td>Create graphics and charts</td>
<td>Use online software to develop simple infographics</td>
<td>Use graphic design software to develop infographics</td>
<td>Use data modelling software to create complex data visualisations</td>
</tr>
<tr>
<td>Research skills</td>
<td>Understand the scientific method and are familiar with basic quantitative and qualitative methods</td>
<td>Structure their research and apply different techniques to obtain results</td>
<td>Replicate experiments and studies following research methods explained in the literature</td>
<td>Compare data and information from different data sources and research papers and replicate experiments and studies to produce new research articles</td>
</tr>
<tr>
<td>Statistical skills</td>
<td>Perform basic statistical operation including averages, media and median</td>
<td>Perform statistical operations using clusters, using standard deviations, signifiace, chi square, correlation or regression analysis</td>
<td>Use data modelling techniques for different statistical methods such as forecasting to predict future events</td>
<td>Programme databases to perform complex statistical analysis and create models and complex graphs and visualisations</td>
</tr>
<tr>
<td>Civic engagement / Level</td>

<th>Intermediate</th>
<th>Advanced</th>
</tr>
</thead>
<tbody>
<tr>
<td>All levels</td>
<td>Invite subject and data experts to discuss face to face or online with your students about local and global issues</td>
<td>Engage students with political and legal deliverations and discussions at local and global level asking to them analyse the data related to it</td>
<td>Establish a model for students to understand the process and engage them in policy making by reviewing and analysing data and official reports</td>
</tr>
<tr>
<td>Undergrad</td>
<td>Engage students in evaluating facts and contrast information by analysis data sources news from newspapers</td>
<td>Encourage students to use digital tools to engage and monitor political activities and to assess reports and news by analysing their data</td>
<td>Support students in assessing data from their government to identify problems and compare local with global information</td>
</tr>
<tr>
<td>Postgrad</td>
<td>Support students in identifying organisations that are campaigning in citizenship issues enable instances for students engage in civic monitoring activities and evaluation of data driven arguments</td>
<td>Promote collaboration between civil society for students to gain work experience supporting their activities through data and publications, enabling instances for students to work in real scenarios with their data</td>
<td>Support and encourage students to write their final dissertations using open data aiming to find applicable solutions to local and global problems and support them to publish them in an open format to make accessible to the public</td>
</tr>
</tbody>
</table>
Embedding OD in T&L activities

• Identify and describe the learning outcomes for the intended activities;
• Identify the portals which will source the data;
• Clearly identify and describe the challenges students might face;
• Provide training materials for the software students will need to analyse the data;
• Support students in communicating their findings to local or wider communities.
Open Data activities in T&L

- Focus: define the research problems and its relation to the environment students.
- Practicality: match technical applications and practices to expected solutions.
- Expectations: set realistic expectations for data analysis.
Open Data activities in T&L

• Direction: support in finding data portals which contain appropriate information.
• Training: provide training materials for the software students will need to analyse the data.
• Location: use global, local and scientific data which is as granular as possible.
Open Data activities in T&L

• Modelling: develop model solutions to guide students on the challenges and activities.
• Collaboration: support students to work collaboratively and at multidisciplinary level.
• Communication: support students in communicating their findings to local or wider communities
All citizens should have equal opportunities and multiple channels to access information, be consulted and participate. Every reasonable effort should be made to engage with as wide a variety of people as possible (OECD, 2009, p.17).
